

# Design My Card Image Requirements

For best results, please follow these image file requirements.

- **Image file must be a JPEG, PNG, BMP, TIF, or GIF (\*.jpg, \*.jpeg, \*.png, \*.bmp, \*.gif, \*.tif).**  
The easiest way to tell is by looking at the filename; it should end with '.jpg', '.png', '.tif' or '.gif'. This is usually the case with photos from digital cameras and other devices. Most images are in JPEG format.
- **The dimensions should be at least 1,033px x 657px (3.452" x 2.17").**  
If the dimensions are smaller than this, your card image may be produced with "grainy" quality. If the dimensions are greater, the card image will produce with better quality.  
On Windows: Right-Click > Properties > Summary > Advanced  
On Mac: Command+I
- **The maximum file size allowed is 7 MB.**  
Most JPEG, PNG, TIF, and GIF images are under this file size limit, including high megapixel digital cameras.
- **Adobe Flash Player is required to upload images.**
